Software Engineer with 7+ years of experience building secure, scalable products across gaming, fintech, e-commerce, and edtech. Deep expertise in Node.js/NestJS microservices, payments, distributed system design, and AWS/DevOps (EC2, IAM, Secrets Manager, CI/CD). Proven track record delivering high-traffic back-office and customer-facing platforms, leading multi-region rollouts, and driving measurable improvements in performance, reliability, and operational excellence.

🧠 CORE SKILLS

Backend: Node.js NestJS Express REST WebSockets Microservices TypeORM Swagger/OpenAPI

Frontend: React Next.js TypeScript Tailwind CSS

Security: JWT Passport RBAC encryption patterns audit trails secure API design

Mobile: React Native (Expo) expo-router React Query Axios NativeWind

Cloud/DevOps: AWS (EC2, S3, Secrets Manager, IAM) Docker GitHub Actions CI/CD PM2

Data & Messaging: PostgreSQL Redis MongoDB MySQL RabbitMQ/AMQP

Payments/Integrations: Stripe Paystack webhooks notifications (email/SMS/push patterns)

📁 PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer, *Choplife Gaming*

04/2025 – Present
Kigali City, Rwanda

- Built an affiliate + referral growth system used across 5 regions (Uganda, Côte d'Ivoire, Sierra Leone, Gambia, Botswana), including region-aware rules (eligibility, reward caps, currency/locale), attribution, and fraud-resistant tracking.
- Designed the core referral lifecycle: invite links/codes → attribution → activation milestones → reward computation → payout readiness, with idempotent processing to prevent duplicate rewards.
- Casino/tournament operations: game/tournament configuration, player segmentation, promo toggles, schedules, leaderboards visibility controls, and operational "stop/rollback" actions. Risk & compliance support: configurable thresholds, manual review flags, and traceable admin actions (audit logs).
- Worked in a microservices architecture (~25 services), improving reliability via clear API contracts, stricter validation, better error handling, and safe service-to-service authentication patterns.

Software Engineer (Mid-Level Full-Stack), *Eze Wholesale*

08/2023 – 03/2025
San Francisco, CA, USA

- Built automated data extraction and competitive pricing intelligence pipelines with Puppeteer.js, including scheduling, proxy/anti-bot handling, data normalization, and monitoring to keep datasets reliable and actionable for pricing decisions.
- Delivered and maintained internal wholesale/enterprise dashboards using React/Next.js with NestJS APIs, implementing role-based access, robust form/workflow tooling, and operational views for orders, inventory, and customer management.
- Implemented lifecycle email marketing flows and responsive templates (Courier + HTML), tested across major clients, and integrated Crisp for support automation and faster customer issue resolution.

Software Engineer (Mid-Level Full-Stack), *e-Limu World*

11/2021 – 07/2023
Nairobi, Kenya

- Implemented Paystack payments for international transactions, including secure checkout flows, webhook verification, idempotent transaction handling, and reconciliation for reliable payment state management.
- Instrumented product analytics with Mixpanel (key funnels, retention, and cohort events), and improved API/data-layer performance through SQL query optimization, indexing, and careful profiling of slow endpoints.

- Built a scheduling subsystem for daily learning activities (time windows, recurring tasks, and reminders), with resilient job execution, retry-safe processing, and clear auditability of scheduled events.

Junior Full-Stack Engineer, Cartolinks Solution Limited

01/2019 – 11/2021
Lagos, Nigeria

- Architected and delivered a secure revenue generation/e-commerce solution (digital products + ticketing) using Medusa.js, including secure delivery/validation patterns for digital goods.
- Built a back-office dashboard for the revenue generation/e-commerce platform, providing admin tooling for digital product and ticket management, sales reporting, and order workflow operations.
- Containerized services with Docker and supported AWS deployments (e.g., S3/EC2) with production hardening practices.

NOTABLE PROJECT

Ontop (Mobile App + Microservices Backend)

08/2025 – Present

- Built a mobile-first services marketplace (Expo/React Native) with API-driven discovery: featured categories, top-ranked providers, category/subcategory browsing, and optimized loading.
- Implemented geo-location search and ranking: distance-aware listings with permission-gated location prompts, last-known location fallback, and sort/filter options.
- Designed backend microservices + integrations supporting payments and trust: provider offerings read-model for discovery, secure service-to-service auth, automated provider-offering creation post-approval, and production deployment on AWS EC2 (PM2, Secrets Manager env sync, GitHub Actions CI/CD).

Ekklesia Music Streaming

09/2024 – 10/2025

- Built a radio-style streaming platform with an admin workflow to schedule playlists/programs, publish time-based rotations, and manage “now playing” metadata for listeners.
- Designed a content management dashboard for uploading/curating tracks, organizing shows, managing schedules, and moderating content with role-based access.

Kidapay — Multi-Currency Crypto Payment Gateway

02/2023 – 09/2025

- Built a NestJS-based payment processing backend enabling merchants to accept 10+ cryptocurrencies (BTC, ETH, USDT, USDC, BNB, MATIC, ALGO, TRON, SOL, LTC) via unique per-checkout blockchain addresses..
- Designed merchant wallet system tracking fiat and crypto balances across deposit, withdrawal, and fee deduction flows, with configurable fee structures (percentage/fixed, capped) per currency.

PraiseDev Portfolio & IT Solutions

03/2018 – 09/2019

- Built a professional portfolio + IT services platform showcasing web, mobile, and blockchain work.
- Implemented responsive UI with modern UX using Tailwind CSS and interactive visuals (Three.js).

AWARDS

Algorand Network — 3rd place, Umoja 2 bounty hack (multi-campaign crowdfunding dApp using Reach)

EDUCATION

Federal University of Technology Owerri (FUTO), B.Eng, Chemical Engineering

CERTIFICATIONS / TRAINING

HackerRank (2023) — Basic Problem Solving Certificate
